DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because the length of the abstract exceeds 15 lines or 150 words. Correction is required. See MPEP § 608.01(b).

Claim Objections

3. Claims 33-35 are objected to because of the following informalities: The term "the chamfered end" in claims 33-35 lacks antecedent basis from the referred claim 23. Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claims 1-8,10-17,19-24,27-32, 36-41,44-50, and 53-56 are rejected under 35
 U.S.C. 102(b) as being anticipated by Diederich (US 5,620,479).

Application/Control Number: 10/014,846

Art Unit: 3737

Diederich anticipates all feature elements in claims 1, 4, 23, 38, 40, and 55. Diederich discloses of an ultrasound therapy method and apparatus, where a catheter 12 is designed to place in a living body, invasively placing the catheter to a therapeutically targeted volume. Once the catheter is placed in a desired volume, an HIFU is applied to the targeted tissue to perform therapeutic procedure where the catheter includes distal end with ultrasound transducers 16 providing heat directed that the target volume (col. 3, lines 11-67; col. 6, line 43 – col. 7, line 35). The shape of the transducer is cylindrical or disk like with probe rotation to cover different angle to the treatment volume (col. 12, line 48- col. 13, line 2). In addition, the catheter consists of thermocooling mechanism to remove heat from the probe by circulating pressurized fluid around the heating transducer (col. 3, line 66 – col. 4, line 62).

Claims 2 and 3: Dierderich further disclose that the transducers 16 above are segmented to select different volume heating zone. The heating promotes coagulation of the tissue (col. 3, lines 42-64; col. 4, lines 29-62).

Claims 5, 20, 36, 37, 53, and 54: Diederich also discloses of temperature sensor to generate temperature representation of the heating zone during the therapeutical procedure (col. 4, lines 54-col. 5, line 3).

Claims 6, 17-19, 39, 50, and 56: Diederich discloses of heat sources consisting of laser or optical light source to direct the thermal control of the heating elements (col. 1, line 60 – col. 2, line 6).

Claims 7, 8, 11-16, 21, 22, 24, 27-32, 41, and 44-49: The cooling mechanism described above is further disclosed by Diederich as having cooling fluid circulating the transducer with cooling chamber, air for liquid to improve the heating distribution and controlling the heating

Application/Control Number: 10/014,846 Page 4

Art Unit: 3737

temperature. The air duct or spacer 22 is arranged inside the outer tube where the tube is supplying heat removal from the transducer (col. 7, line 57 - col. 8, line 7).

Claim 10: Diederich discloses of power deposition control, which increases or reduces heating of the transducer segment (col. 4, lines 29-62).

Allowable Subject Matter

6. Claim 9, 18, 25, 26, 42, 43, 51, and 52 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/014,846

Art Unit: 3737

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Law et al (US 5,762,066) and Masychev (US 6,123,719).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William Jung whose telephone number is 703-605-4364. The examiner can normally be reached on Mon-Fri 8:30 AM to 5 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dennis Ruhl can be reached on 703-308-2262. The fax phone number for the organization where this application or proceeding is assigned is 703-308-0758.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1148.
